

# **COMP9020**

Foundations of Computer Science

Lecture 2: Number Theory

## Administrivia

- Quiz 1 released Saturday; due 12:00 Monday 18 September (AEST)
- First Formatif tasks available today
- Reminder: Consultations on Thursday and Sunday 7pm (online, link on website)
- Weekly feedback

# Topic 0: Number Theory

[LLM] [RW]
Week 1 Number Theory Ch. 8 Ch. 1, 3

# Number theory in Computer Science

### Applications of number theory include:

- Cryptography/Security (primes, divisibility)
- Large integer calculations (modular arithmetic)
- Date and time calculations (modular arithmetic)
- Solving optimization problems (integer linear programming)
- Interesting examples for future topics in this course

## Notation for numbers

#### **Definition**

- Natural numbers  $\mathbb{N} = \{0, 1, 2, \ldots\}$
- Integers  $\mathbb{Z} = \{\ldots, -1, 0, 1, 2, \ldots\}$
- Positive integers  $\mathbb{N}_{>0} = \mathbb{Z}_{>0} = \{1, 2, \ldots\}$
- Rational numbers (fractions)  $\mathbb{Q} = \left\{ \frac{m}{n} : m, n \in \mathbb{Z}, n \neq 0 \right\}$
- Real numbers (decimal or binary expansions)  $\mathbb{R}$   $r = a_1 a_2 \dots a_k \cdot b_1 b_2 \dots$

In  $\mathbb N$  and  $\mathbb Z$  different symbols denote different numbers.

In  $\mathbb Q$  and  $\mathbb R$  the standard representation is not necessarily unique.

#### NB

Proper ways to introduce reals include Dedekind cuts and Cauchy sequences, neither of which will be discussed here. Natural numbers etc. are either axiomatised or constructed from sets (  $0 \stackrel{\text{def}}{=} \{\}$ ,  $n+1 \stackrel{\text{def}}{=} n \cup \{n\}$  )

# Floor and ceiling

#### **Definition**

- $[.]: \mathbb{R} \longrightarrow \mathbb{Z}$  **floor** of x, the greatest integer  $\leq x$
- $[.]: \mathbb{R} \longrightarrow \mathbb{Z}$  **ceiling** of x, the least integer  $\geq x$

## **Example**

$$\lfloor \pi \rfloor = 3 = \lceil e \rceil$$
  $\pi, e \in \mathbb{R}; \ \lfloor \pi \rfloor, \lceil e \rceil \in \mathbb{Z}$ 

### Simple properties

- $|-x| = -\lceil x \rceil, \text{ hence } \lceil x \rceil = |-x|$
- For all  $t \in \mathbb{Z}$ :
  - $\lfloor x + t \rfloor = \lfloor x \rfloor + t$  and

#### **Fact**

Let  $k, m, n \in \mathbb{Z}$  such that k > 0 and  $m \ge n$ . The number of multiples of k between n and m (inclusive) is

$$\left\lfloor \frac{m}{k} \right\rfloor - \left\lfloor \frac{n-1}{k} \right\rfloor$$

## Absolute value

### **Definition**

$$|x| = \begin{cases} x & \text{, if } x \ge 0 \\ -x & \text{, if } x < 0 \end{cases}$$

### **Example**

$$|3| = |-3| = 3$$
  $3, -3 \in \mathbb{Z}; |3|, |-3| \in \mathbb{N}$ 

#### **Exercises**

### RW: 1.1.4

(b) 
$$2 \lfloor 0.6 \rfloor - \lfloor 1.2 \rfloor = 2 \lceil 0.6 \rceil - \lceil 1.2 \rceil =$$
  
(d)  $\lceil \sqrt{3} \rceil - \lceil \sqrt{3} \rceil =$ 

RW: 1.1.19

a) Give x, y such that  $\lfloor x \rfloor + \lfloor y \rfloor < \lfloor x + y \rfloor$ :

20T2: Q1 (a)

(i) True or false for all  $x \in \mathbb{R}$ :  $\lceil |x| \rceil = |\lceil x \rceil|$ 

### **Exercises**

### RW: 1.1.4

(b) 
$$2 \lfloor 0.6 \rfloor - \lfloor 1.2 \rfloor = -1$$
  
  $2 \lceil 0.6 \rceil - \lceil 1.2 \rceil = 0$ 

(d) 
$$\lceil \sqrt{3} \rceil - \lfloor \sqrt{3} \rfloor = 1$$

### RW: 1.1.19

(a) Give 
$$x, y$$
 such that  $\lfloor x \rfloor + \lfloor y \rfloor < \lfloor x + y \rfloor$ :  $x = y = 0.9$ 

## 20T2: Q1 (a)

(i) True or false for all  $x \in \mathbb{R}$ :  $\lceil |x| \rceil = \lceil \lceil x \rceil \rceil$  — false (e.g. x = -1.5)

Numbers and Numerical Operations

## Divisibility

Greatest Common Divisor and Least Common Multiple

Modular Arithmetic

Euclidean Algorithm, again

Feedback

# Divisibility

#### **Definition**

For  $m, n \in \mathbb{Z}$ , we say m divides n if  $n = k \cdot m$  for some  $k \in \mathbb{Z}$ .

We denote this by m|n

Also stated as: 'n is divisible by m', 'm is a divisor of n', 'n is a multiple of m'

 $m \nmid n$  — negation of  $m \mid n$ 

#### NB

Notion of divisibility applies to all integers — positive, negative and zero.

### **Exercises**

*True* or *False* for all  $n \in \mathbb{Z}$ :

- 1|n
- -1|n
- 0|*n*
- n|0

## RW: 1.2.2

- (a) n|1
- (b) n|n
- (c)  $n \mid n^2$

#### **Exercises**

*True* or *False* for all  $n \in \mathbb{Z}$ :

- 1|n true
- $\bullet$  -1|n true
- 0|n false (only when n=0)
- n|0 true

# RW: 1.2.2

- (a) n|1 false (only when  $n = \pm 1$ )
- (b) n|n true
- (c)  $n|n^2$  true

## gcd and lcm

#### **Definition**

Let  $m, n \in \mathbb{Z}$ .

- The greatest common divisor of m and n, gcd(m, n), is the largest positive d such that d|m and d|n.
- The **least common multiple** of m and n, lcm(m, n), is the smallest positive k such that m|k and n|k.
- Exception: gcd(0,0) = lcm(0,n) = lcm(m,0) = 0.

### **Example**

$$gcd(-4,6) = gcd(4,-6) = gcd(-4,-6) = gcd(4,6) = 2$$
  
 $lcm(-5,-5) = \dots = 5$ 

# gcd and lcm

### NB

gcd(m, n) and lcm(m, n) are always taken as non-negative even if m or n is negative.

### **Fact**

 $gcd(m, n) \cdot lcm(m, n) = |m| \cdot |n|$ 

# Primes and relatively prime

#### **Definition**

- A number n > 1 is **prime** if it is only divisble by  $\pm 1$  and  $\pm n$ .
- m and n are relatively prime if gcd(m, n) = 1

### **Examples**

- 2, 3, 5, 7, 11, 13, 17, 19 are all the primes less than 20.
- 4 and 9 are relatively prime; 9 and 14 are relatively prime.

#### **Exercises**

RW: 1.2.7(b)  $\gcd(0, n) \stackrel{?}{=}$ 

RW: 1.2.12 Can two even integers be relatively prime?

RW: 1.2.9 Let m, n be positive integers.

- (a) What can you say about m and n if  $lcm(m, n) = m \cdot n$ ?
- (b) What if lcm(m, n) = n?

#### **Exercises**

RW: 1.2.7(b)  $\gcd(0, n) \stackrel{?}{=} |n|$ 

RW: 1.2.12 Can two even integers be relatively prime? No. (why?)

RW: 1.2.9 Let m, n be positive integers.

(a) What can you say about m and n if  $lcm(m, n) = m \cdot n$ ?

They must be relatively prime since always  $lcm(m, n) = \frac{mn}{\gcd(m, n)}$ 

(b) What if lcm(m, n) = n? m must be a divisor of n

$$\gcd(m, n) = \begin{cases} m & \text{if } m = n \\ \gcd(m - n, n) & \text{if } m > n \\ \gcd(m, n - m) & \text{if } m < n \end{cases}$$

$$\gcd(m, n) = \begin{cases} m & \text{if } m = n \\ \gcd(m - n, n) & \text{if } m > n \\ \gcd(m, n - m) & \text{if } m < n \end{cases}$$

#### **Example**

$$gcd(45,27) = gcd(18,27)$$
  
=  $gcd(18,9)$   
=  $gcd(9,9)$   
= 9

$$\gcd(m, n) = \begin{cases} m & \text{if } m = n \\ \gcd(m - n, n) & \text{if } m > n \\ \gcd(m, n - m) & \text{if } m < n \end{cases}$$

#### **Example**

```
gcd(108,8) = gcd(100,8)
= gcd(92,8)
\vdots :
= gcd(8,4)
= gcd(4,4)
= 4
```

$$\gcd(m, n) = \begin{cases} m & \text{if } m = n \\ \gcd(m - n, n) & \text{if } m > n \\ \gcd(m, n - m) & \text{if } m < n \end{cases}$$

#### **Fact**

For m > 0, n > 0 the algorithm always terminates.

#### **Fact**

For  $m, n \in \mathbb{Z}$ , if m > n then gcd(m, n) = gcd(m - kn, n)

#### **Fact**

For  $m, n \in \mathbb{Z}$ , if m > n then gcd(m, n) = gcd(m - n, n)

#### Proof.

We first show that for all  $d \in \mathbb{Z}$ , (d|m and d|n) if, and only if, (d|m-n and d|n):

"
$$\Rightarrow$$
": if  $d|m$  and  $d|n$  then  $m = a \cdot d$  and  $n = b \cdot d$ , for some  $a, b \in \mathbb{Z}$ , so  $m - n = (a - b) \cdot d$ ,

hence 
$$d \mid m - n$$

" $\Leftarrow$ ": if d|m-n and d|n then  $m-n=a\cdot d$  and  $n=b\cdot d$ , for some  $a,b\in\mathbb{Z}$ ,

so 
$$m = (m - n) + n = (a + b) \cdot d$$
,  
hence  $d \mid m$ 

Therefore, any common divisor of m and n is a common divisor of m-n and n, and vice versa.

Therefore, the greatest common divisor of m and n is the greatest common divisor of m-n and n.

## Euclid's division lemma

#### **Fact**

For  $m \in \mathbb{Z}$ ,  $n \in \mathbb{Z}_{>0}$  there exists  $q, r \in \mathbb{Z}$  with  $0 \le r < n$  such that

$$m = q \cdot n + r$$

#### Observe:

- $q = \lfloor \frac{m}{n} \rfloor$
- $oldsymbol{o}$   $r = m q \cdot n$

## mod and div

#### **Definition**

Let  $m, p \in \mathbb{Z}$ ,  $n \in \mathbb{Z}_{>0}$ .

- $m \operatorname{div} n = \lfloor \frac{m}{n} \rfloor$
- $m \% n = m (m \operatorname{div} n) \cdot n$
- $m =_{(n)} p$  if  $n \mid (m-p)$

### Important!

 $m =_{(n)} p$  is **not standard**. More commonly written as

$$m = p \pmod{n}$$

## mod and div

### **Fact**

- $0 \le (m \% n) < n$ .
- m = (n) p if, and only if, (m % n) = (p % n).
- $m =_{(n)} (m \% n)$
- If  $m =_{(n)} m'$  and  $p =_{(n)} p'$  then:
  - $m + p =_{(n)} m' + p'$  and
  - $m \cdot p =_{(n)} m' \cdot p'$ .

#### **Exercises**

- 42 div 9  $\stackrel{?}{=}$
- 42 % 9 <sup>?</sup>
- $(-42) \text{ div } 9 \stackrel{?}{=}$
- $(-42) \% 9 \stackrel{?}{=}$
- True or False:

$$(a + b) \% n = (a \% n) + (b \% n)$$
?

### **Exercises**

• 42 div 9 
$$\stackrel{?}{=}$$

• 
$$42 \% 9 \stackrel{?}{=}$$
 6

• 
$$(-42) \text{ div } 9 \stackrel{?}{=} -5$$

• 
$$(-42) \% 9 \stackrel{?}{=} 3$$

True or False:

$$(a + b) \% n = (a \% n) + (b \% n)$$
?

False (take 
$$a = b = 1$$
,  $n = 2$ )

### **Exercises**

- $10^3 \% 7 \stackrel{?}{=}$
- $10^6 \% 7 \stackrel{?}{=}$
- $10^{2021} \% 7 \stackrel{?}{=}$
- What is the last digit of 7<sup>2023</sup>?

### **Exercises**

- $10^3 \% 7 \stackrel{?}{=}$
- $10^6 \% 7 \stackrel{?}{=}$  1
- $10^{2021} \% 7 \stackrel{?}{=}$
- What is the last digit of  $7^{2023}$ ?

#### **Exercises**

#### RW: 3.5.20

- (a) Show that the 4 digit number n = abcd is divisible by 2 if and only if the last digit d is divisible by 2.
- (b) Show that the 4 digit number n = abcd is divisible by 5 if and only if the last digit d is divisible by 5.

#### RW: 3.5.19

(a) Show that the 4 digit number n = abcd is divisible by 9 if and only if the digit sum a + b + c + d is divisible by 9.
